

# Rose's Journey....

*My name is Rose\* and I am 83 years old. I have lived alone for over 15 years since my husband died but during that time I have forged a new life with many supportive friends in my community.*

*However, getting old is not easy. Recently I was faced with multiple, complex and difficult surgeries, postoperative complications, drug allergies and extreme weight loss which resulted in limited mobility and significant depression.*

*However, I found hope through the START Psychiatry Day Hospital Program at the Glenrose.*

*\*Note: To uphold patient privacy an alternative image and name is used.*

*The START Psychiatry Day Hospital Program assessed my needs, reviewed my medications and developed a rehabilitation program targeted at treating my depression.*

*As a dedicated computer user, I credit many of the current software programs available with helping me improve my function. I have also enjoyed getting back into activities at my church and I cherish my time with family, dear friends and my two cats.*

*I'm not sure how I would have managed without the staff and physician support through the Day Hospital Program.*

**Fact:** Our Foundation is supporting significant upgrades to our Independent Living Suite (ILS), which is a self contained one bedroom suite located inside the Glenrose. Using sensors and smart technology it helps patients prepare for independent living after their rehabilitation treatments.
